

The new **PSL** Strip Light System is Aquatic and therefore can operate in or out of water.

With its totally new design concept the **PSL** Strip Light can be fitted to both new and existing waterfalls, also all types of water features including swimming pools.

As the system is completely waterproof it can be used to illuminate all underwater applications to provide an outstanding lighting feature with 8 selectable colours/effects.

Colour Selection for the **PSL** can be made from a standard Light switch connected to the driver using the **PAL** 8 function colour lock switching method and as the PDM-1 has a memory feature fitted so it will always start on the colour or effect selected when the power was last switched off.

PSL Driver (PDM1) Outdoor or Indoor

### FEATURES
